LAB 6 SOLUTION

Set Up Nexus Repository and Configure User Access

Name: Sidra-Tul-Muntaha

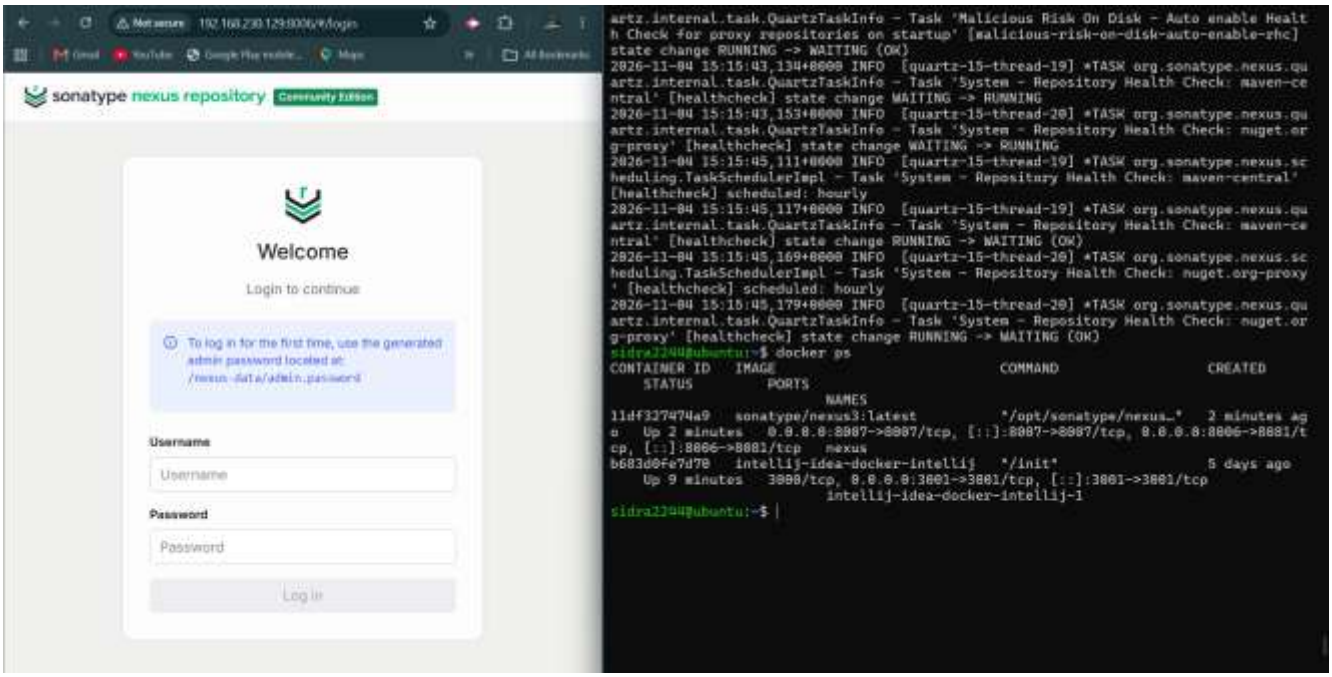

Registration No: 23-BSCS-84

Course: DevOps

GitHub Username: sidra2244

Task 1: Run Nexus Repository and Complete the Initial Setup

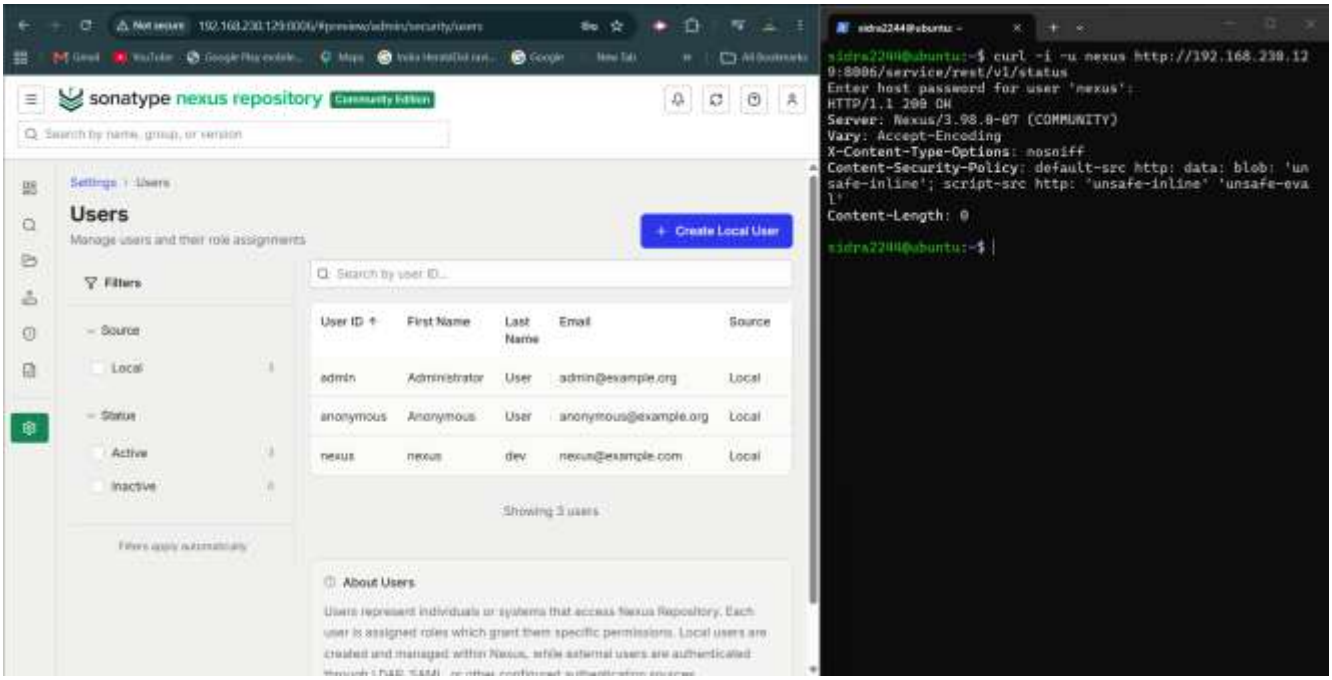

nexus_container_running.png

The Nexus container is running successfully with the required ports published.

Task 2: Create a Role and User and Verify Access

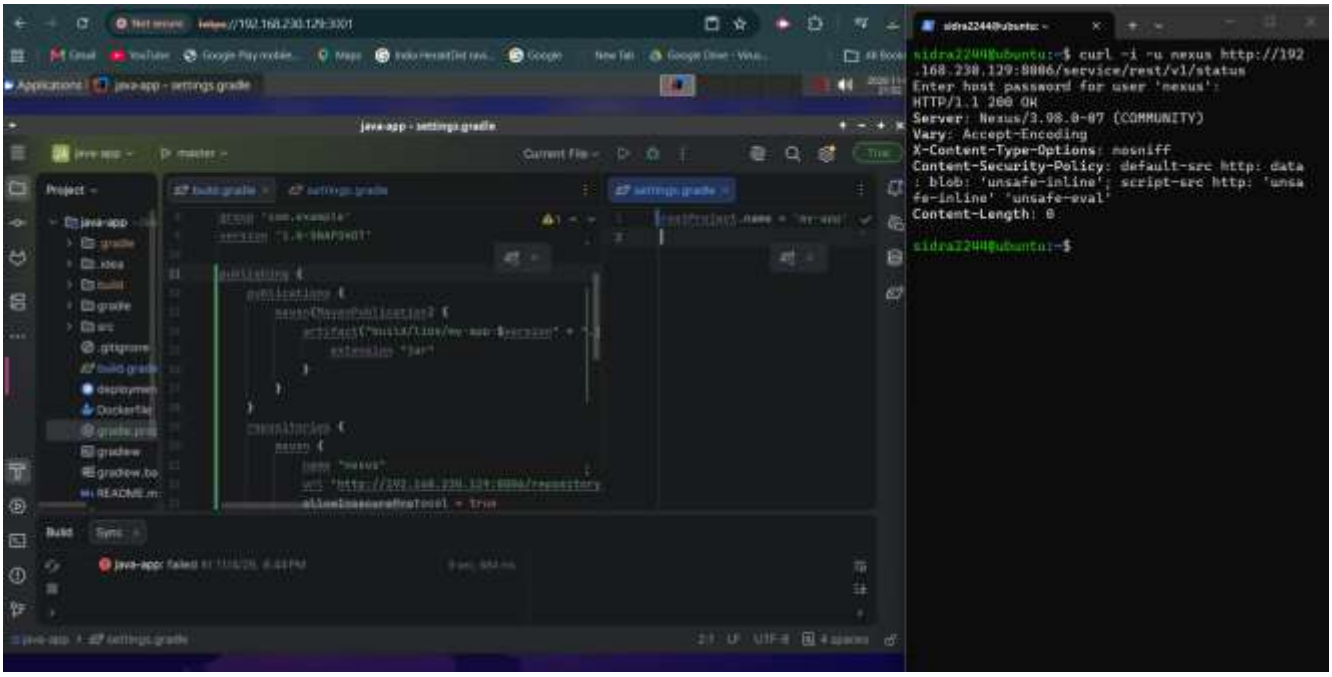

nexus_user_access.png

The Nexus user was authenticated successfully through the Status API.

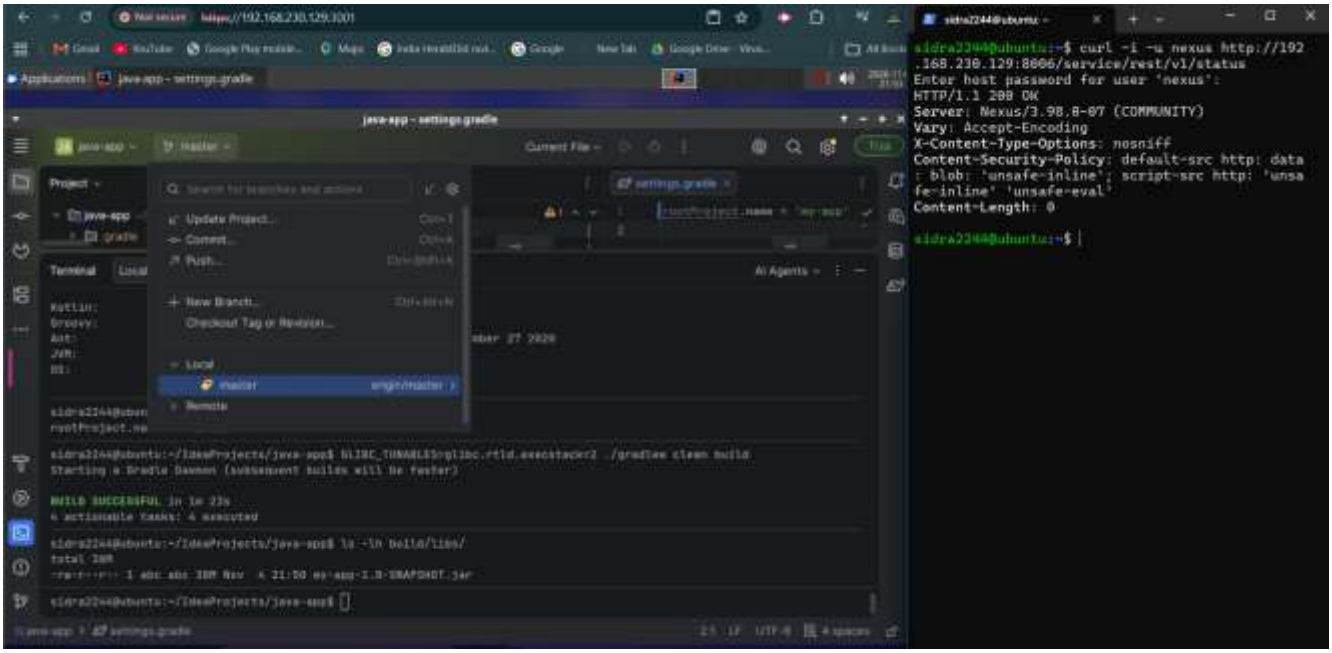

Task 3: Build and Publish the Gradle Application to Nexus

gradle_nexus_configuration.png

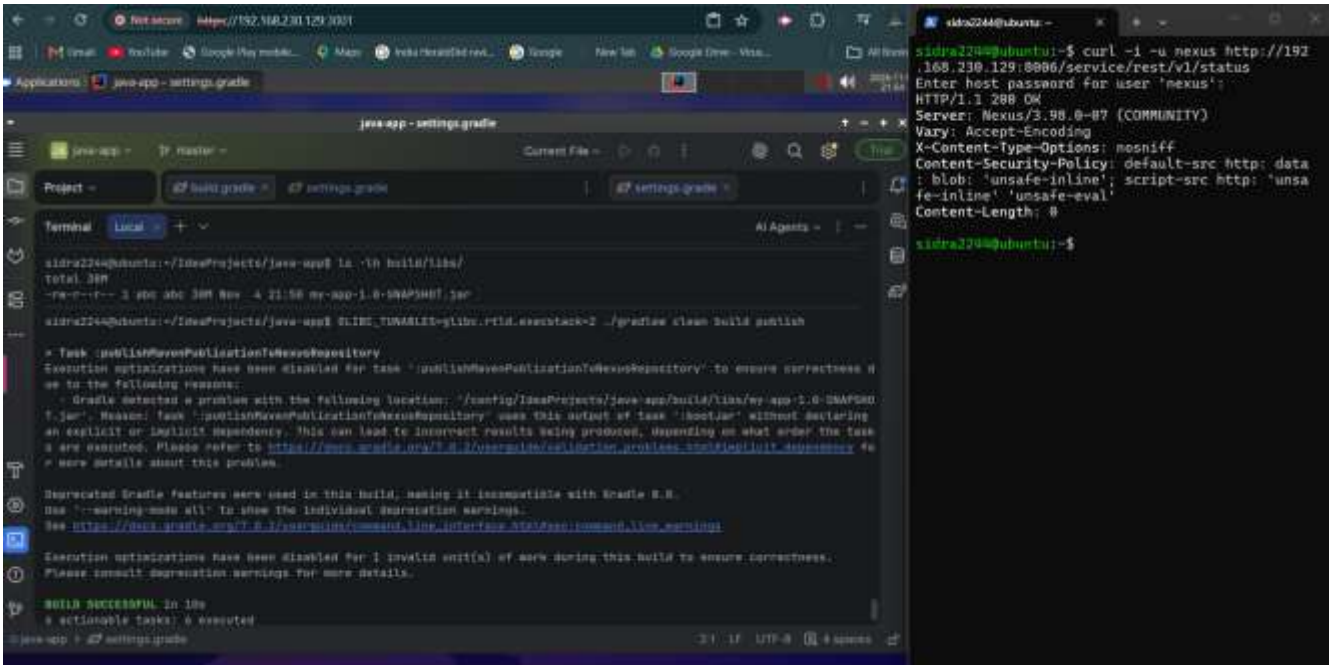

Gradle is configured to publish the application to the Nexus snapshots repository.

gradle_nexus_build.png

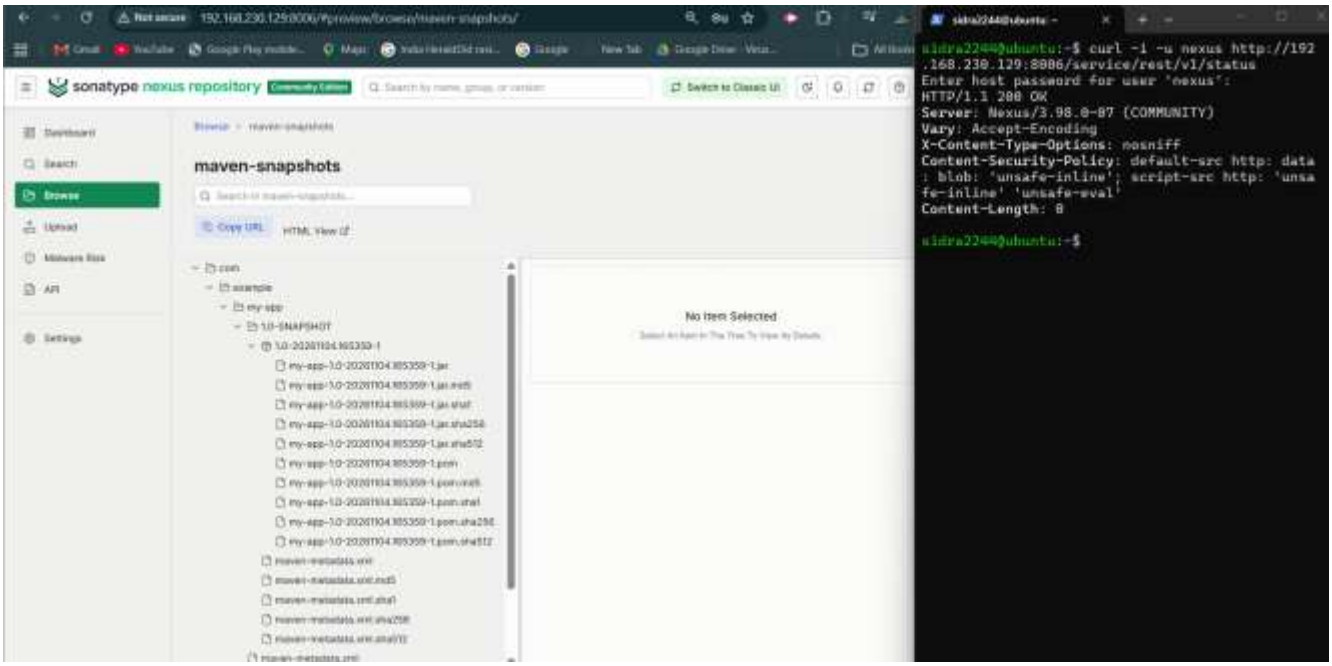

The Gradle project was built successfully and the JAR file was generated.

gradle_nexus_publish.png

The Gradle application was successfully published to Nexus.

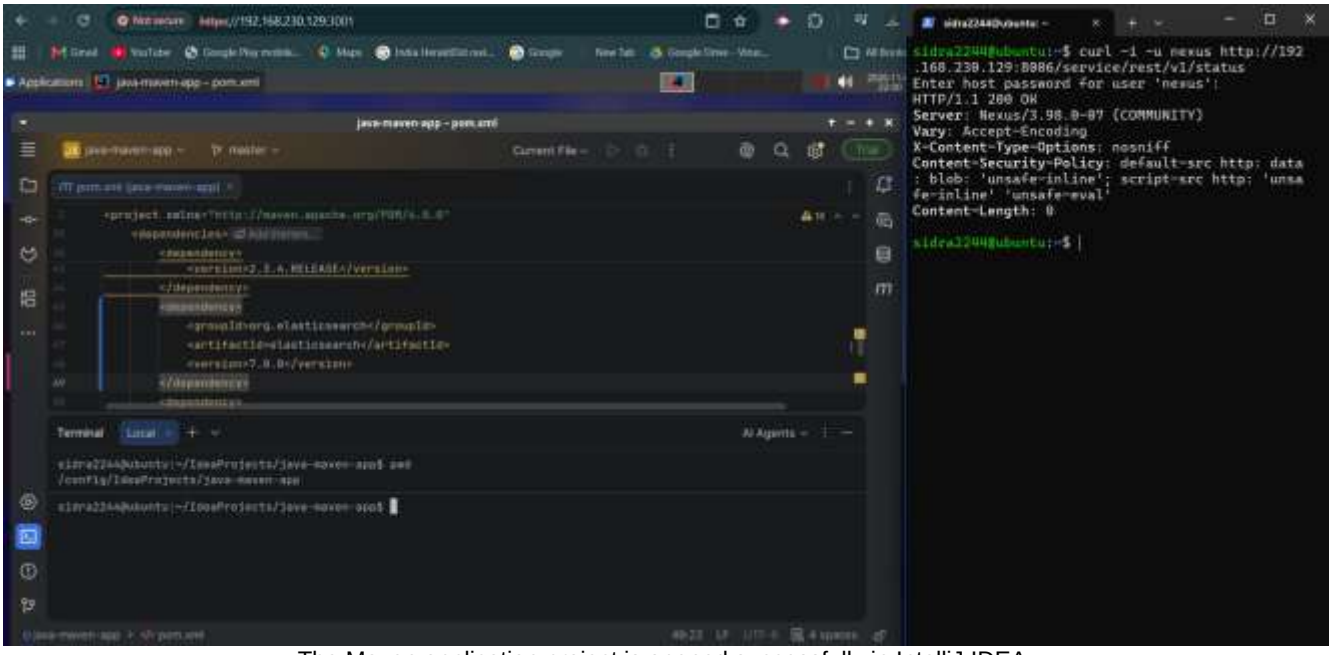

nexus_gradle_artifact.png

The published Gradle artifact and Maven metadata are visible in Nexus.

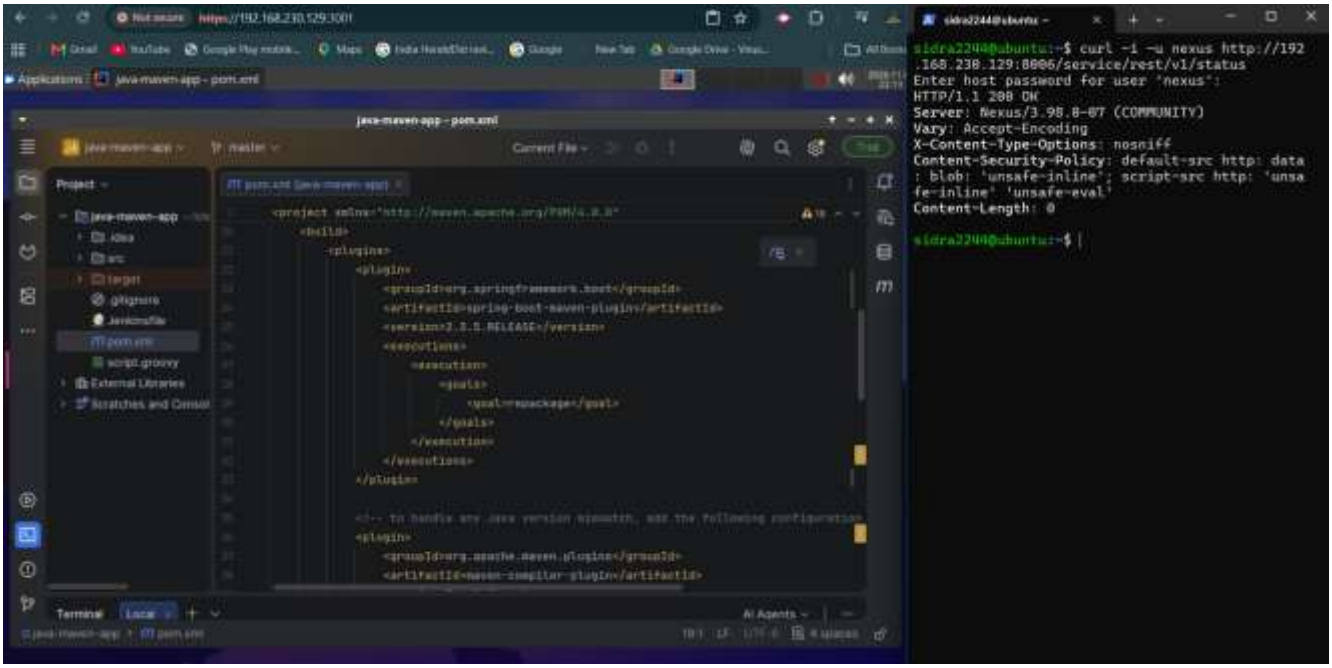

Task 4: Publish the Maven Application to Nexus

maven_nexus_project.png

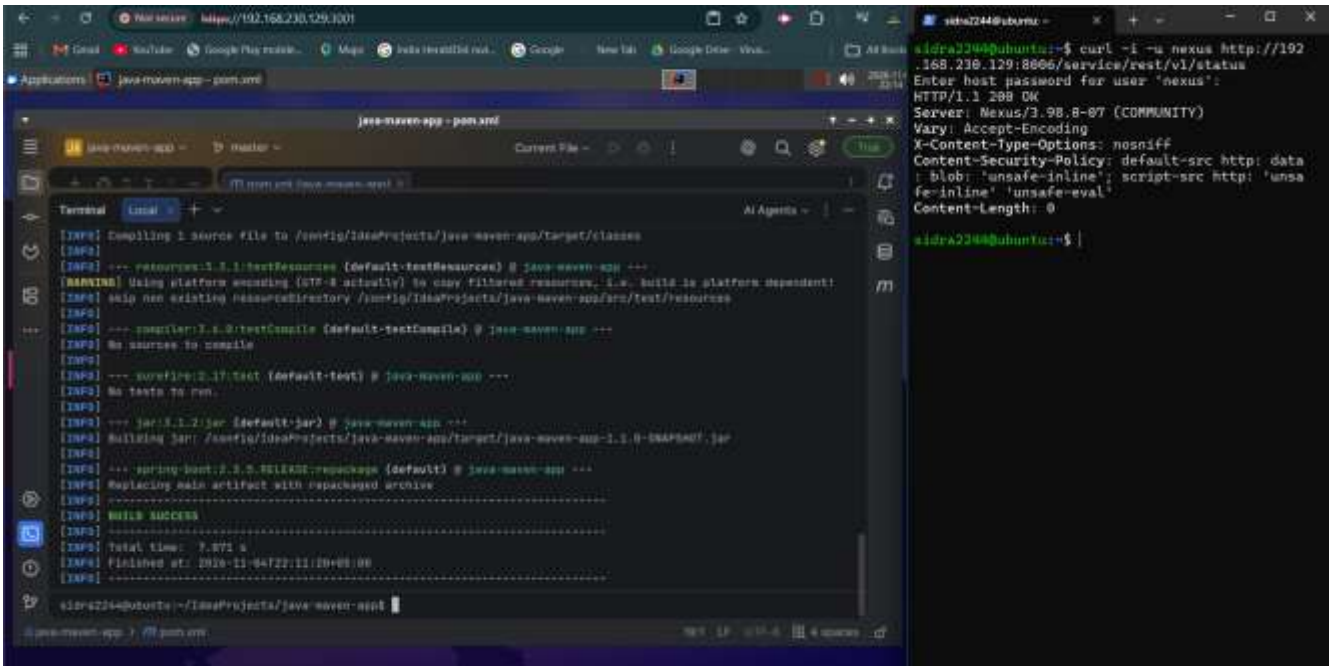

The Maven application project is opened successfully in IntelliJ IDEA.

maven_distribution_management.png

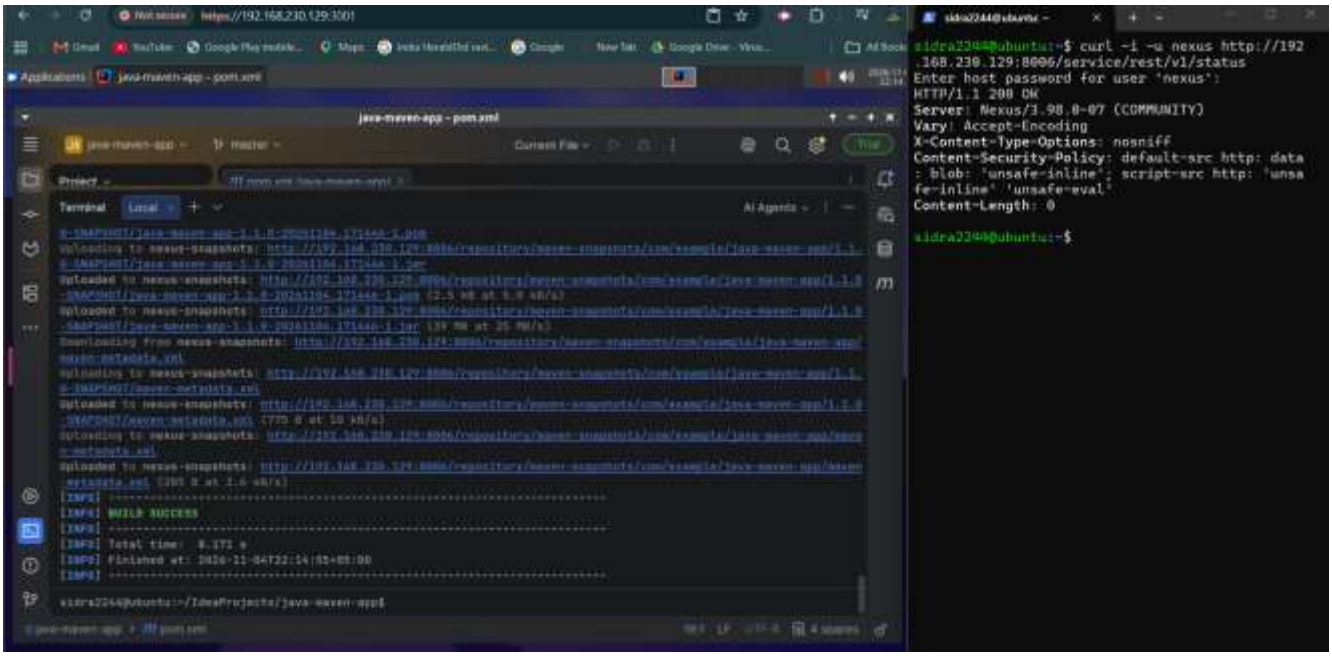

The Maven project is configured with the Nexus snapshot repository.

maven_package_nexus.png

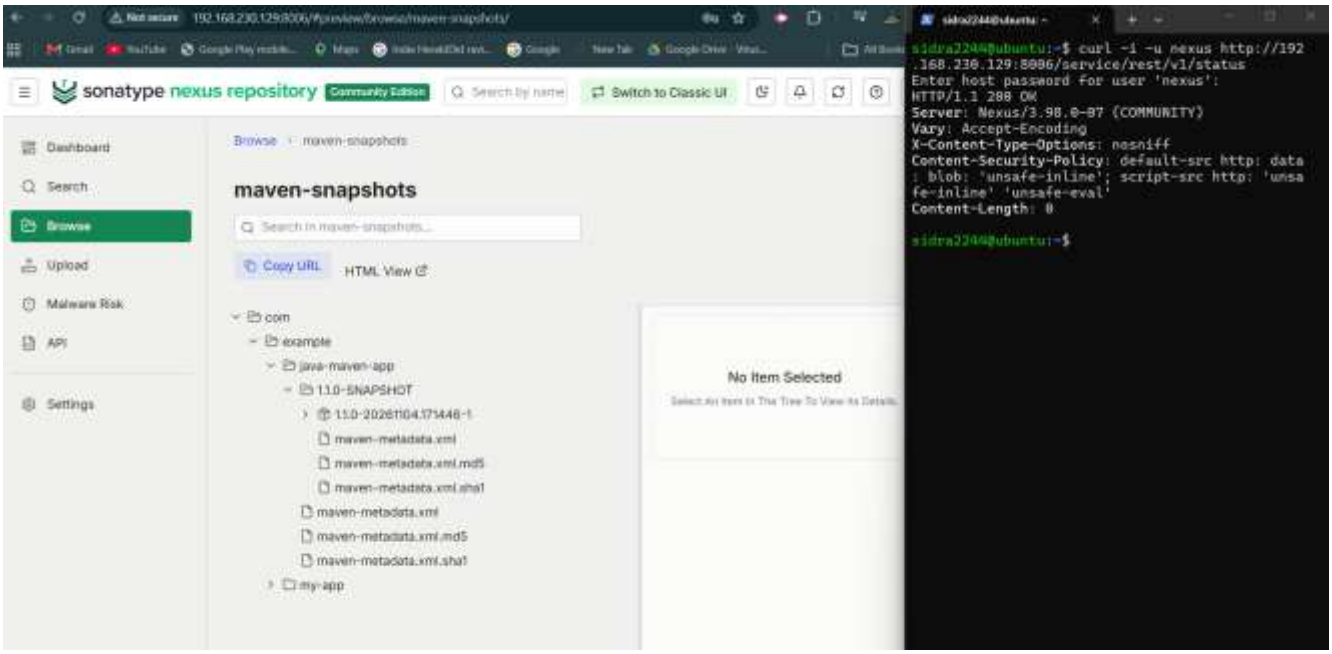

The Maven application was packaged successfully.

maven_deploy_nexus.png

The Maven snapshot was successfully deployed to Nexus.

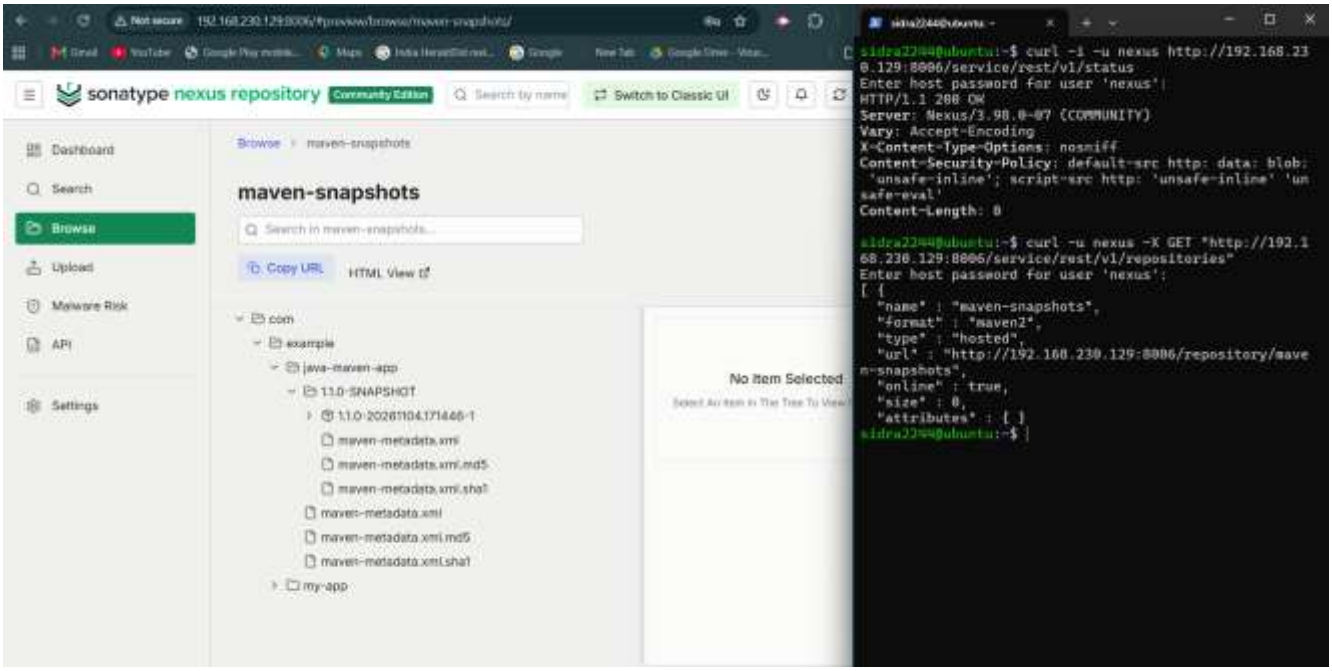

nexus_maven_artifact.png

The published Maven artifact and its metadata are visible in Nexus.

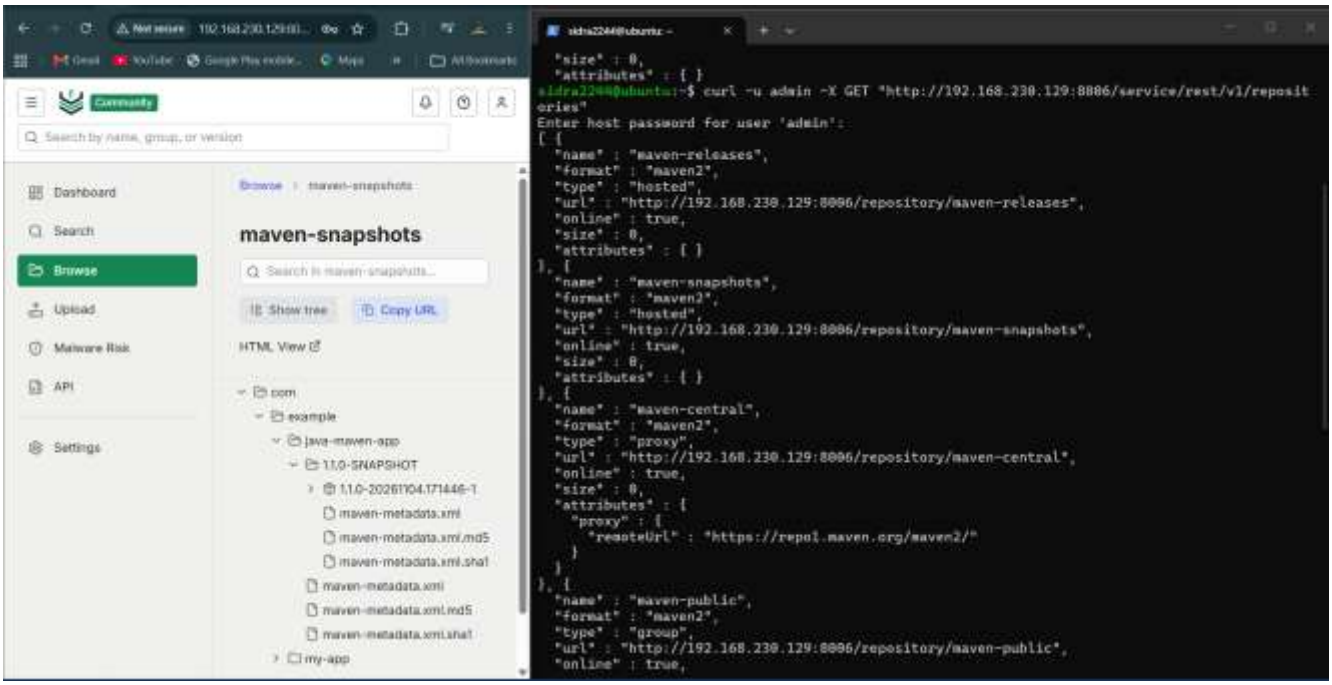

Task 5: Inspect Nexus Repositories and Components Using the REST API

nexus_repositories_user.png

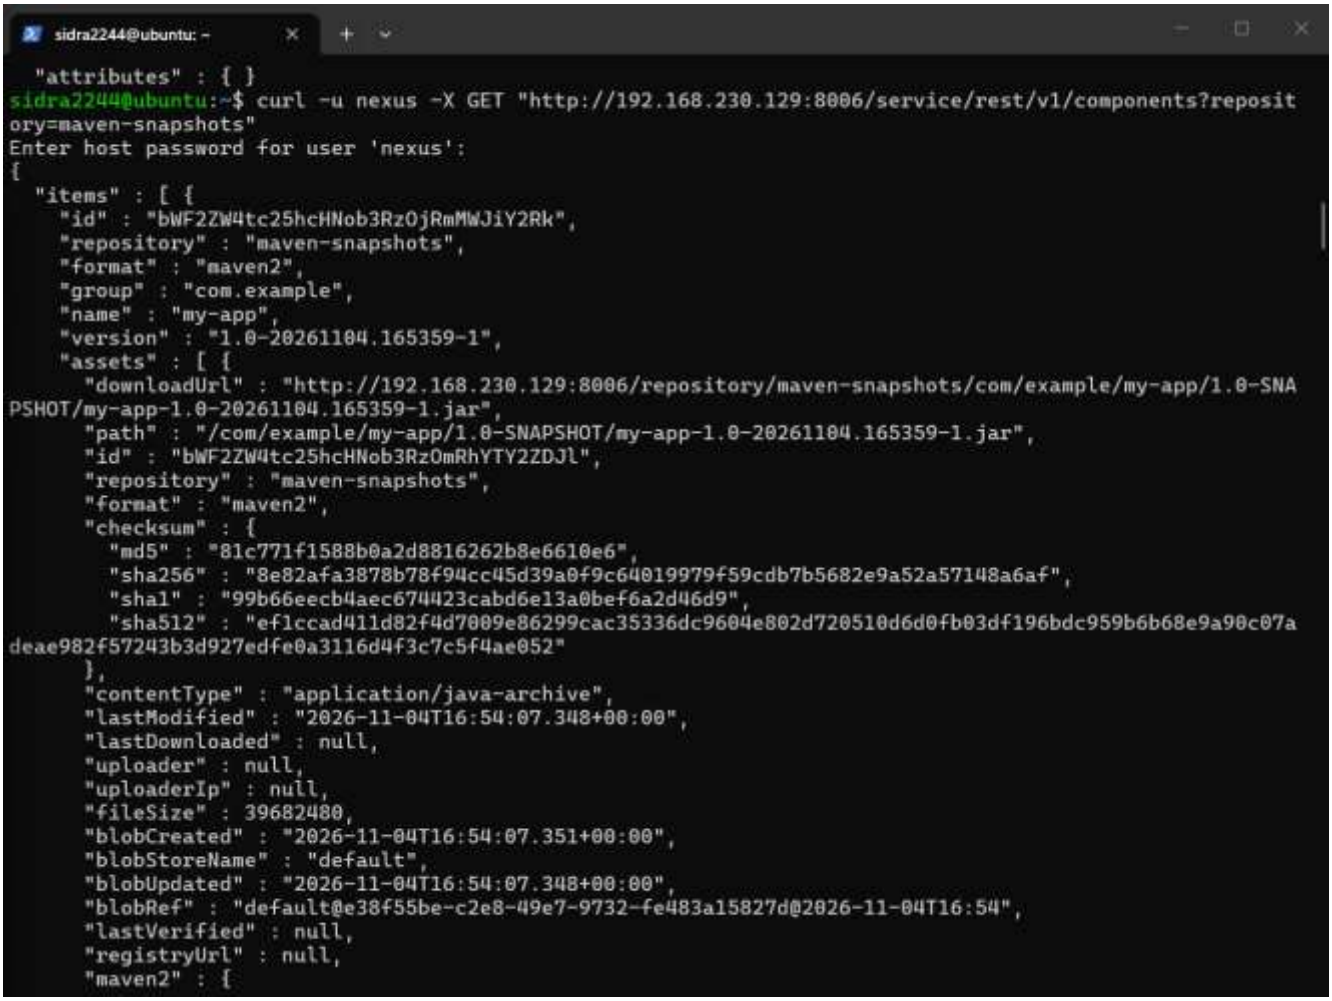

The repositories were listed using the restricted Nexus user account.

nexus_repositories_admin.png

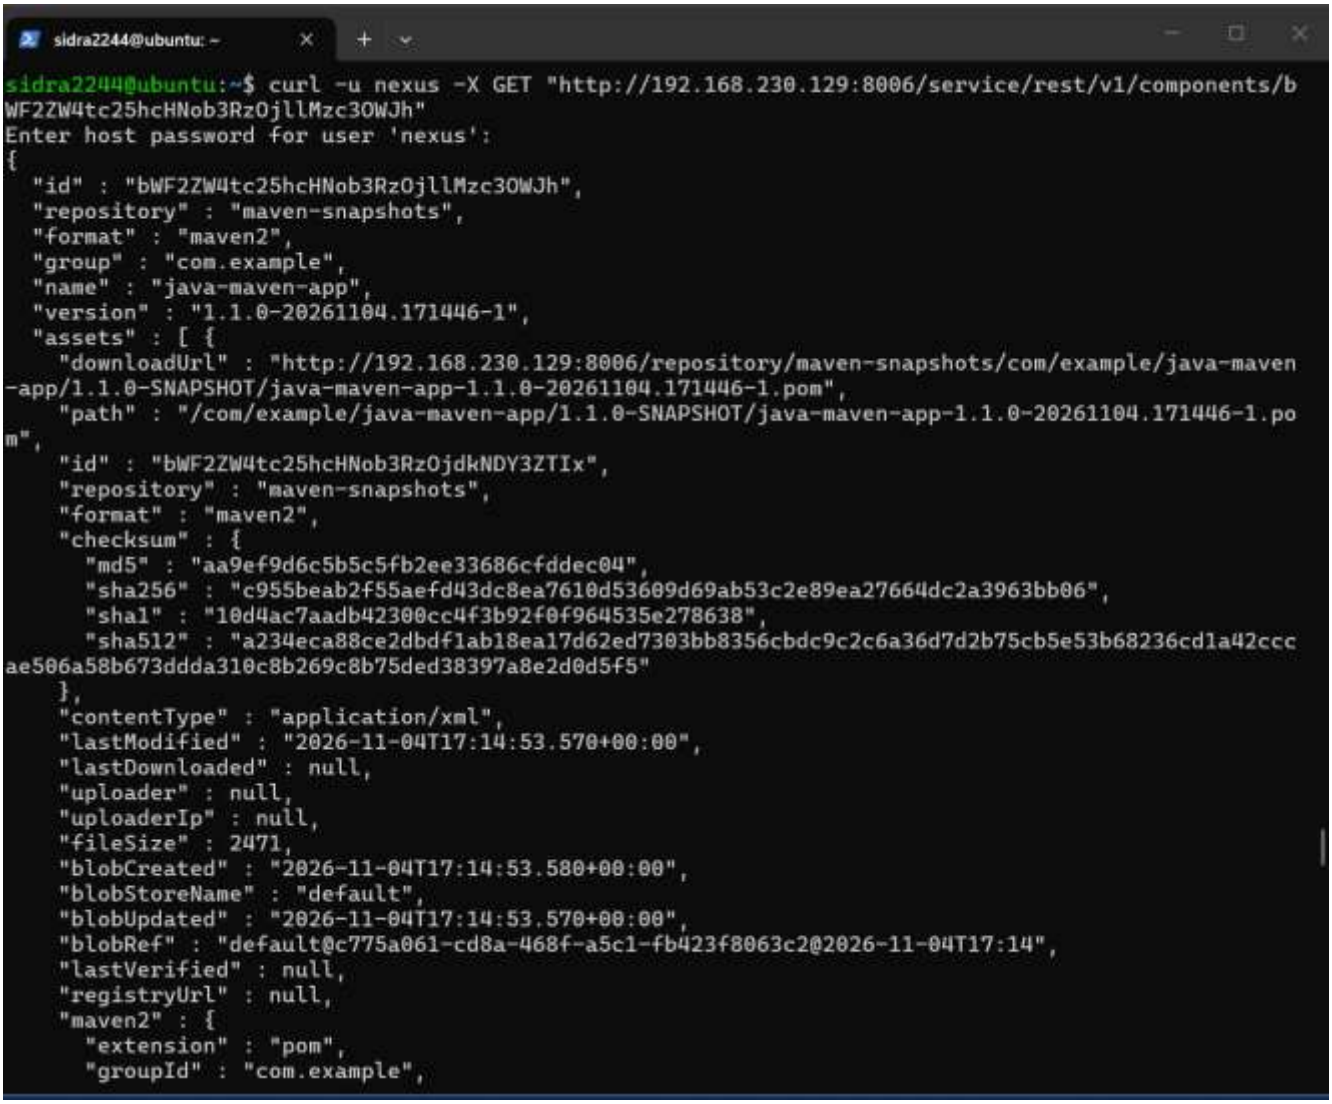

The repositories were listed using the Nexus administrator account.

nexus_components_list.png

The Maven snapshot components were retrieved through the Nexus REST API.

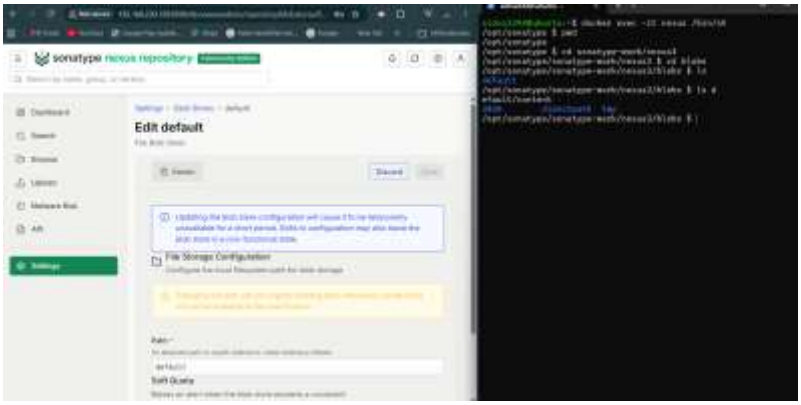

nexus_component_details.png

The details of the selected Nexus component were retrieved successfully.

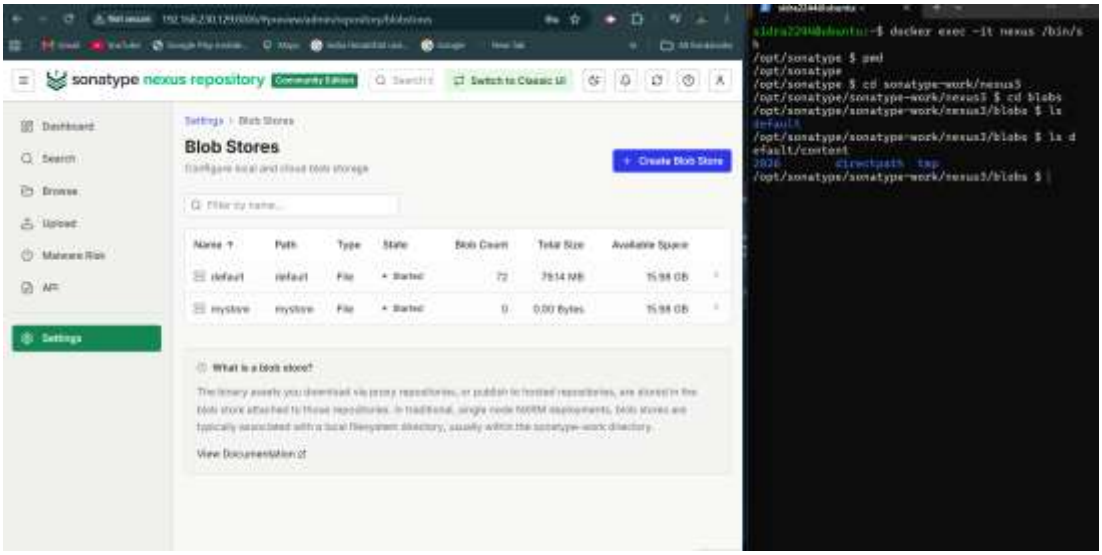

Task 6: Create a Nexus Blob Store and Docker Hosted Repository

nexus_default_blob_content.png

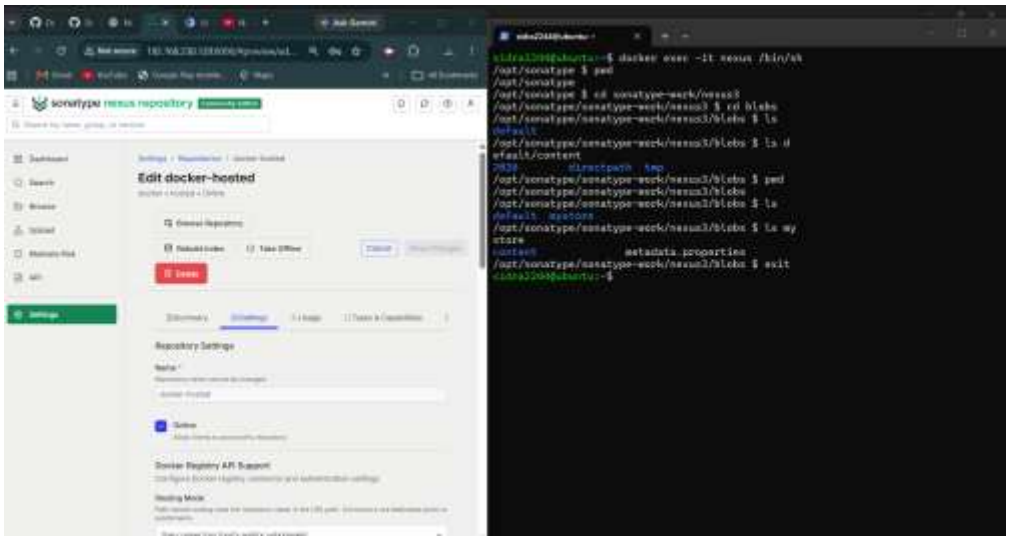

The default blob store directory and its content were inspected.

nexus_mystore_created.png

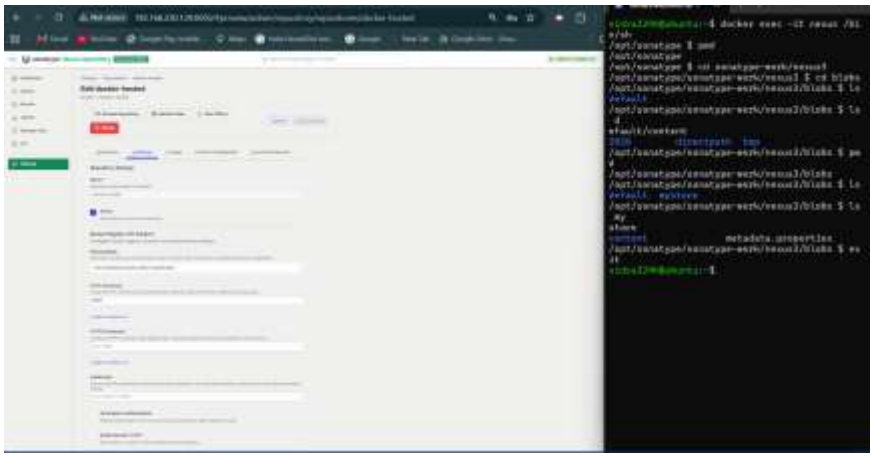

The new mystore file blob store was created and is in the Started state.

nexus_blob_directories.png

The default and mystore blob store directories are present in the container.

nexus_docker_hosted_repository.png

The docker-hosted repository was created using the mystore blob store.

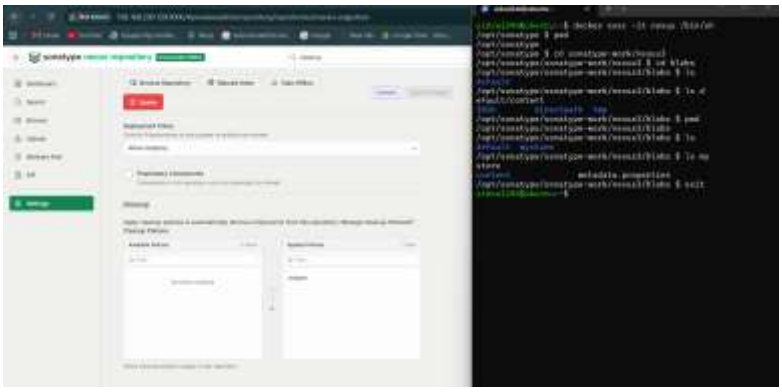

Task 7: Create and Run a Maven Snapshot Cleanup Policy

nexus_cleanup_policy_created.png

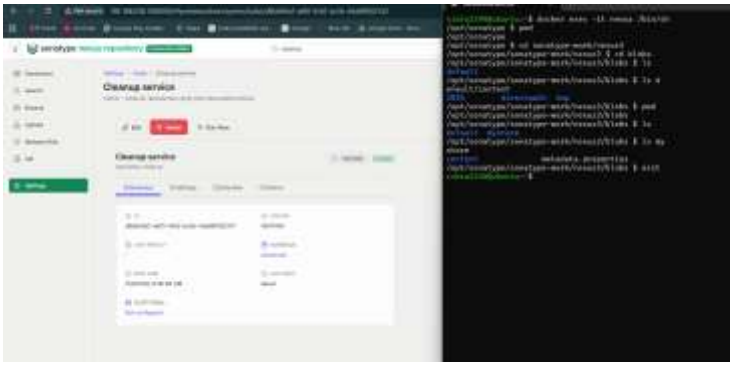

The Maven cleanup policy was created with the required snapshot matcher.

nexus_cleanup_policy_attached.png

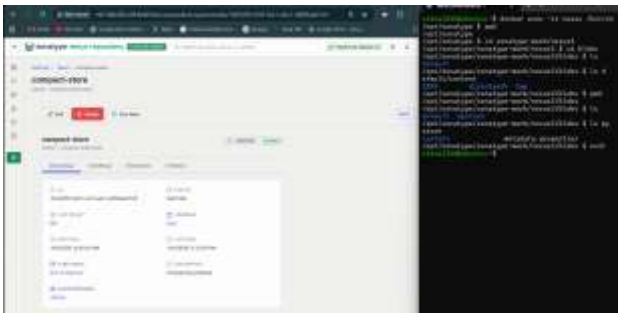

The cleanup policy was attached to the maven-snapshots repository.

nexus_cleanup_task_waiting.png

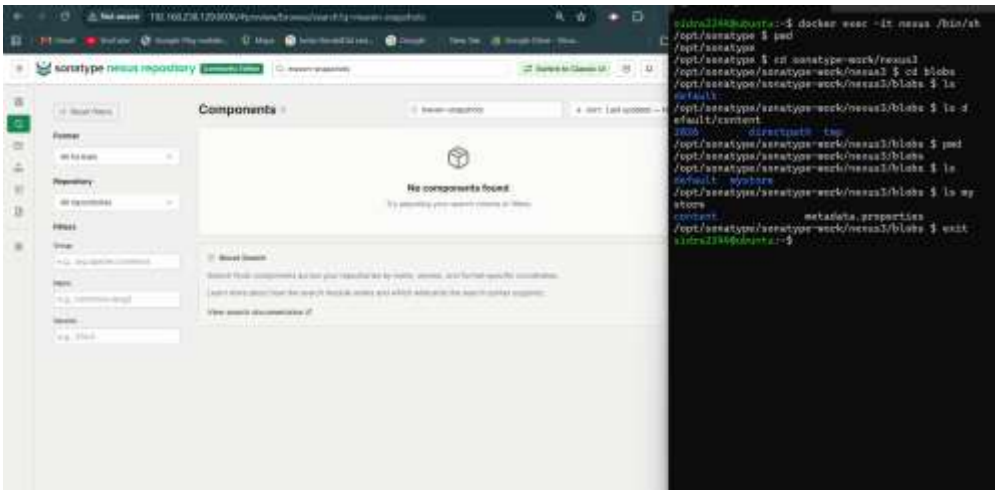

The Nexus cleanup service is waiting for its scheduled run.

nexus_cleanup_task_completed.png

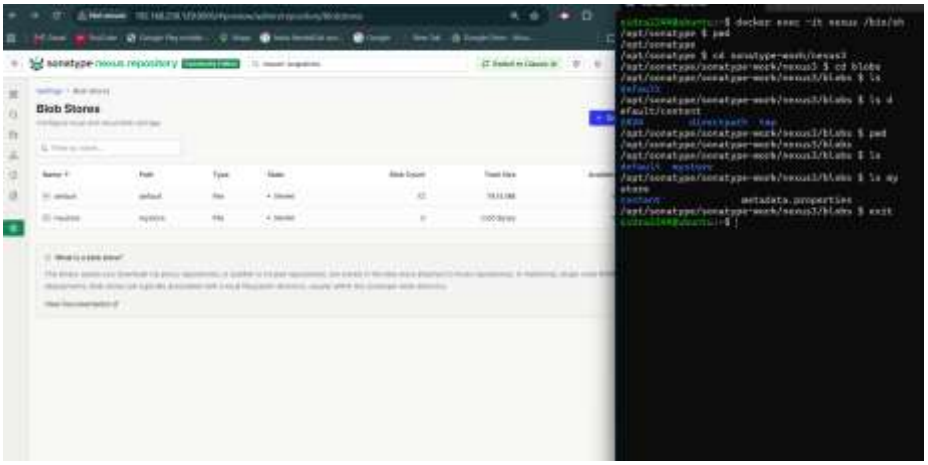

The cleanup service completed successfully.

nexus_maven_snapshots_empty.png

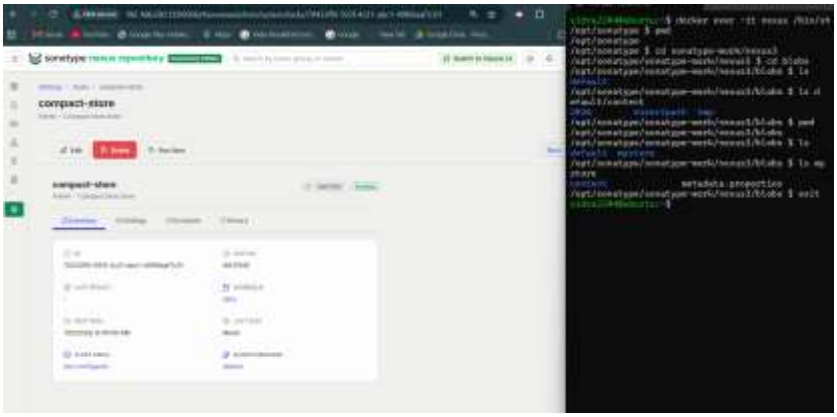

The maven-snapshots repository is empty after cleanup.

nexus_blob_store_before_compaction.png

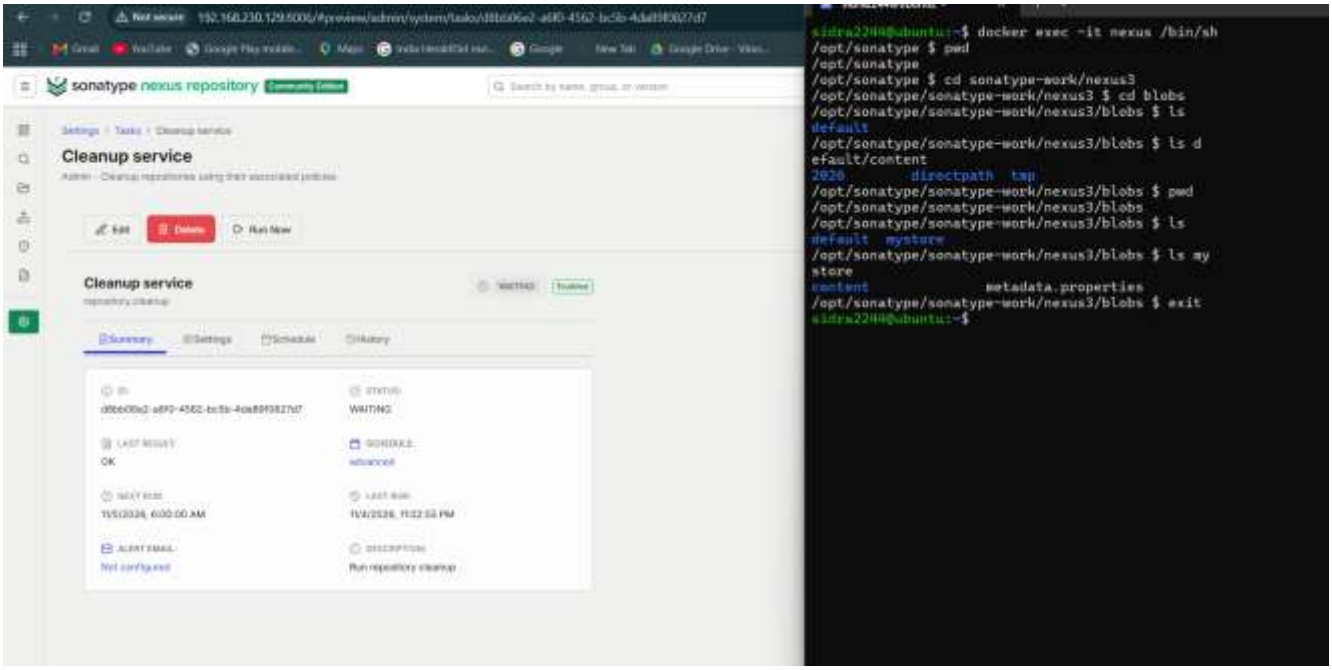

The default blob store usage was recorded before compaction.

nexus_compact_task_configured.png

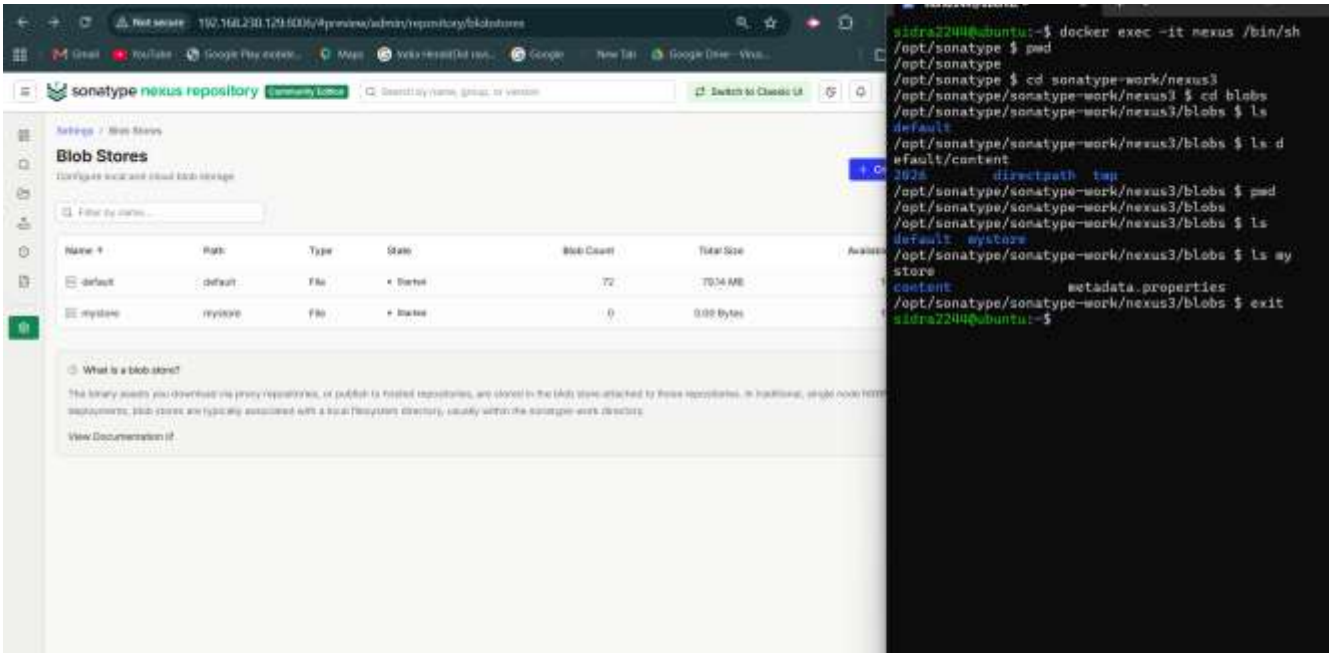

The compact-store task was configured for the default blob store.

nexus_compact_task_completed.png

The blob store compaction task completed successfully.

nexus_blob_store_after_compaction.png

The default blob store usage was checked after compaction.
